From (hours)	To (hours)	Comment/Questions
0:30:00	0:30:00	Initially, it takes time to connect fonts, pull pictures, logos and optimize them.
2:30:00	3:00:00	The header itself is simple. It will take time to adapt it - to make a hamburger menu with an animation of the transition between a cross and a hamburger, and an animation of opening / closing the menu
1:30:00	2:00:00	Time is needed to align the absolute block and adaptive. On the tablet, you will need to reduce the font of the text and sizes, check that the background looks fine. Do the same on the mob.
1:30:00	1:30:00	Time is needed to align the logo, check if it looks ok with another test logo, button layout, adaptive.
2:00:00	2:00:00	You need to typeset 2 blocks. On the tablet, reduce indents and fonts, place blocks 1 under another. Decrease fonts and indents on the mob.
3:30:00	5:30:00	Question: are the participant cards clickable, i.e. when you click on the card on the right, it is displayed in large size on the left? http://joxi.ru/MAjNQINUkwwDGA. The time fork (+ 2h) in the assessment depends on the answer to the question. If the cards are clickable, then you need to write js logic, and somewhere to store complete information for all speakers to display full info on the left by clicking on the card on the right. In addition to the possible js logic, time is needed to fold the grid with speaker cards, check on other test photos of different sizes, to make the cards look good. You need to make up a card with the full information of the participant, and also check it with another photo. On the tablet, you need to reduce the font of the main text, make the grid 2 cards in a row. On the mob grid, make 1 card in a row, in the left card with the main info place a photo above the main text.
2:30:00	3:00:00	It will take time to build a grid of logos, to check if the layout looks ok with other test logos of different sizes. On a tablet, a grid of logos will need to be placed on 2 units in a row, on a mob - 1 unit each. These media queries will also take time. The font of the main text will need to be reduced and the text stretched in width.
1:30:00	1:30:00	It will be necessary to lay out the blocks, place them 1 under another on the tablet, reduce indents and fonts. Decrease indents and fonts on the mob, position the text.
1:30:00	2:00:00	
17:00:00	21:00:00	
	0:30:00 2:30:00 1:30:00 1:30:00 2:00:00 3:30:00 1:30:00 1:30:00	From (hours) To (hours)
